

Intents

Now lets see how we can move to the new activity

To do so we use the Intent() constructor in which we pass the current activity using “this” and the next activity (where we want to go upon button click)

```
val intent = Intent(this, GreetingActivity::class.java)
```

```
15 fun createCard(view: View) {  
16  
17     val intent = Intent( packageContext: this, GreetingActivity::class.java)  
18  
19     startActivity(intent)  
20  
21 }
```

So now upon clicking the button it will move us to a new activity which is GreetingActivity that we created earlier and it is an empty page
